Micromouse Competition Rules

Micromouse Competiton Chair: Soon Wan (gimsoon@ieee.org)
Region 1 Student Activities Chair: Rob Reilly (reilly@media.mit.edu)

The following rules will be observed for the Region 1 Micromouse competition that will take place at Boston University during the annual Region 1 Student Activities Conference. These rules were adapted from the 1986 *Official Rules for North American Micromouse Contests*.

A. Objective

In this contest the contestant or team of contestants design and build an autonomous robotic "mouse" that negotiates a maze of standard dimensions from a specified corner to its center in the shortest time.

B. Contest Eligibility

1. All contestants must be an undergraduate IEEE student member at a Region 1 school at the time of entry in the Micromouse contest. Any student who graduated anytime during the Fall 2012 semester is eligible to enter the contest. Up to two graduate students per team are also allowed as stated in **Rule B.5** below, providing they meet all other requirements.
2. All contestants must be an IEEE Student Member or must have submitted an application for membership (and have it accepted by their Student Branch Counselor) prior to entry in the contest.
3. The contestant(s) will make a brief presentation of their mouse design prior to the competition (5 minutes max) if time allows.
4. The Micromouse entry may be the effort of an individual or a team. In the case of a team it should be possible to demonstrate that each individual made a significant contribution and that they are all IEEE members.

5. A team may consist of up to five people. A team of four or five people may include no more than two graduate students. A team of two or three people may have no more than one graduate student. A team consisting of a single graduate student is not allowed.

6. All entrants to the contest must declare their intention to enter the contest by **March 31, 2013**.

Please e-mail your name, team members, school, IEEE Membership, and the name of your Micromouse, to Soon Wan (gimsoon@ieee.org).

7. The number of mice that may be entered from each school is limited to one. If the total number of declared mice, from all schools, is less than the number of schools eligible to compete, additional entries will be accepted to compete in the contest. The maximum number of entries will be limited to the same number as the number of the schools in the Region. Entries falling into this category will be accepted based on the order of receipt of notification by the Region 1 Student Activities Coordinator. Two or more mice of near identical design from the same school are not allowed.

C. Rules for the Micromouse

1. A Micromouse shall be self-contained (no remote controls). A Micromouse shall not use an energy source employing a combustion process.
2. A Micromouse shall not leave any part of its body behind while negotiating the maze.
3. A Micromouse shall not jump over, fly over, climb, scratch, cut, burn, mark, damage, or destroy the walls of the maze.
4. A Micromouse shall not be larger either in length or in width, than 25 centimeters. The dimensions of a Micromouse that changes its geometry during a run shall not be greater than 25 cm x 25 cm. There are no restrictions on the height of a Micromouse.
5. Any violation of these rules will constitute immediate disqualification

D. Rules for the Maze

1. The maze is composed of multiples of an 18 cm x 18 cm unit square. The maze comprises 16 x 16 unit squares. The walls of the maze are 5 cm high and 1.2 cm thick (**assume 5% tolerance for mazes**). The outside wall encloses the entire maze.
2. The sides of the maze walls are white, the tops of the walls are red, and the floor is black. The maze is made of wood, finished with non-gloss paint.

WARNING: Do not assume the walls are consistently white, or that the tops of the walls are consistently red, or that the floor is consistently black. Fading may occur; parts from different mazes may be used. Do not assume the floor provides a given amount of friction. It is simply painted plywood and may be quite slick. The maze floor may be constructed using multiple sheets of plywood. Therefore there may be a seam between the two sheets on which any low-hanging parts of a mouse may snag.

3. The start of the maze is located at one of the four corners. The start square is bounded on three sides by walls. The start line is located between the first and second squares. That is, as the mouse exits the corner square, the time starts. The destination goal is the four cells at the center of the maze. At the center of this zone is a post, 20 cm high and each side 2.5 cm. (This post may be removed if requested.) The destination square has only one entrance.
4. Small square zones (posts), each 1.2 cm x 1.2 cm, at the four corners of each unit square are called lattice points. The maze is so constituted that there is at least one wall at each lattice point.
5. Multiple paths to the destination square are allowed and are to be expected. The destination square will be positioned so that a wall-hugging mouse will NOT be able to find it.

E. Rules for the Contest

1. Each contesting Micromouse is allocated a total of 10 minutes of access to the maze from the moment the contest administrator acknowledges the contestant(s) and grants access to the maze. Any time used to adjust a mouse between runs is included in the 10 minutes. Each run (from the start cell to the center zone) in which a mouse successfully reaches the destination square is given a run time. The minimum run time shall be the mouse's official time. First prize goes to the mouse with the shortest official time. Second prize to the next shortest, and so on. **NOTE**, again, that the 10-minute timer continues even between runs. Mice that do not enter the center square will be ranked by the maximum number of cells they consecutively transverse without being touched. All mice who enter the center square within their 10 minute allotment are ranked higher than those who do not enter the center square.
2. Each run shall be made from the starting square. The operator may abort a run at any time. If an operator touches the Micromouse during a run, it is deemed aborted, and the mouse must be removed from the maze. If a mouse has already crossed the finish line, it may be removed at any time without affecting the run time of that run. If a mouse is placed back in the maze for another run, a one-time penalty of **30 seconds** will be added to the mouse's next run time.
3. After the maze is disclosed, the operator shall not feed information on the maze into the Micromouse however, switch positions may be changed.
4. The illumination, temperature, and humidity of the room shall be those of an ambient environment. (40 to 120 degrees F, 0% to 95% humidity, non-condensing).
BEWARE: Do not make any assumptions about the amount of sunlight, incandescent light, or fluorescent light that may be present at the contest site.
5. The run timer will start when front edge of the mouse crosses the start line and stops when the front edge of the mouse crosses the finish line. The start line is at the boundary between the starting unit square and the next unit square clockwise. The finish line is at the entrance to the destination square.
